AI AGENT ENGINEER

AI Agent Engineer building production agent systems and the platforms they run on: MCP/tool-use contracts, CLI/skill distribution, evals and evidence-gated releases, and governed agent access to production infrastructure. Now at Baidu on MeDo, an AI agent app builder.

PUBLIC PROOF

Open work: [user-research skill](#), [TypeScript CLI \(npm\)](#), [MCP package](#), and [developer portal](#) with Redoc/OpenAPI docs.

EXPERIENCE

Baidu - Software Engineer, MeDo

Jul 2026 – Present · Beijing

[MeDo](#) turns a chat prompt into a full-stack app that coding agents generate, deploy, and host. Overseas engineering owner for its revenue platform and builder of the agent tooling the team ships with; 600+ merged changes across 19 repos in under 3 months.

- **Agent-native infra access.** Authored medo-infra-connect, a coding-agent skill + CLI (~5.5K LOC): governed agent access to AWS, MySQL, ClickHouse, and Google/Meta/Bing/GA4 APIs; read-only by default, a verified prod-write path, per-user OAuth.
- **Agent workflow guardrails.** Built release-proof skills (code review ↔ deployed bundle ↔ design doc, 14 incident-derived gates) and a policy hook (59-case suite) enforcing pipeline-only builds in Claude Code, Codex, Cursor, and OpenCode.
- **Agent sandbox abuse response.** Contained an outage where bot accounts prompted the coding agent to run crypto-miners in Kata-VM sandboxes: quantified 42× CPU overcommit; worst-node CPU 96% → 48%, ~40 cores reclaimed, zero restarts.
- **LLM operations bots.** Hardened the Discord → LLM-enriched report → intake desk → issue-tracker pipeline (durable capture + outbox, bounded LLM budgets; cleared an 8-day ticket stall); built an IM data-assistant bot over a read-only Metabase proxy.
- **Revenue platform.** Led the move of the overseas credits ledger and Stripe stack (27 webhook event types, ~29K lines) into a new billing service on its own RDS; cutover loaded 40/40 tables with 0 errors.

Cookiy AI - AI Agent Engineer

Aug 2025 – Jul 2026 · Silicon Valley HQ / Beijing Engineering Team

Voice-AI platform for user-research interviews; 1,040 merged PRs.

- **Contract-first MCP/tool platform.** Owned 41 tools across 4 MCP servers and 26 Zod/OpenAPI schemas; hardened runtime validation, status semantics, and CLI payload compatibility.
- **Eval/release infrastructure.** Built a dual-surface E2E harness (291 cases: 168 SaaS + 123 CLI/MCP), 7 L0-L6 gate profiles, runtime evidence packets, and p95 budgets.
- **Tool-using chat agents.** Re-architected report/study agents around scoped registries, load-before-edit artifact discipline, evidence bundles, and locked-fact guards; removed 7 duplicate tools and ~2.5k LOC of prompts.
- **Realtime voice and Report Voice Platform.** Worked across LiveKit, Deepgram STT, and Tavus/SpatialReal avatars (~200 ms barge-in); shipped a report-voice runtime with streaming TTS, speculative follow-up turn-taking, and VAD barge-in.

SMU - Software Engineer / 0-to-1 Product Owner

Feb 2024 – Jan 2026 · Los Angeles, CA

- Built Python AsyncIO pipelines connecting Amazon Seller Central + Shopify with ERP, processing 500k+ daily orders and cutting sync latency from 15 min to 30 s; built and operated GetDateLove, a production consumer product, end to end.

Quant Trading Systems Venture - Co-Engineer

Apr 2026 – Present · Concurrent

Private live-trading system on AWS: intraday scanner → factor filter → Alpaca bracket orders → SQLite execution ledger → S3 Parquet warehouse → [public research dashboard](#); 250+ commits since Jul 2026.

Huawei Technologies - Software Engineer, SPU Development

Apr 2023 – Feb 2024 · Beijing

- Built C/C++ SPU/router features for NE40E traffic statistics and NetStream monitoring; fixed 50+ packet-processing issues.

SKILLS

Agents and LLMs: MCP servers/tools, agent skills and CLIs, Claude Code / Codex / Cursor / OpenCode, Zod/OpenAPI tool contracts, evals and release gates, OpenAI, Gemini, Bedrock, LiveKit.

Backend and cloud: TypeScript/Node, Python (FastAPI, AsyncIO), Java 21 / Spring Boot, C/C++; MySQL, PostgreSQL, Redis, ClickHouse, Kafka; AWS (EKS, RDS, Lambda), Kubernetes, Stripe Billing.

EDUCATION

Boston University - M.S. Mathematical Finance & FinTech

GPA 3.78

The Ohio State University - B.A. Physics

GPA 3.84 · Dean's List
